

A

Outcome risk separates discordant cells

A1 VTE | in-hospital mortality

Order +	n=501 24.15%	n=6,546 16.76%
Order -	n=7,385 11.83%	n=5,816 7.53%
	Broad administration -	Broad administration +

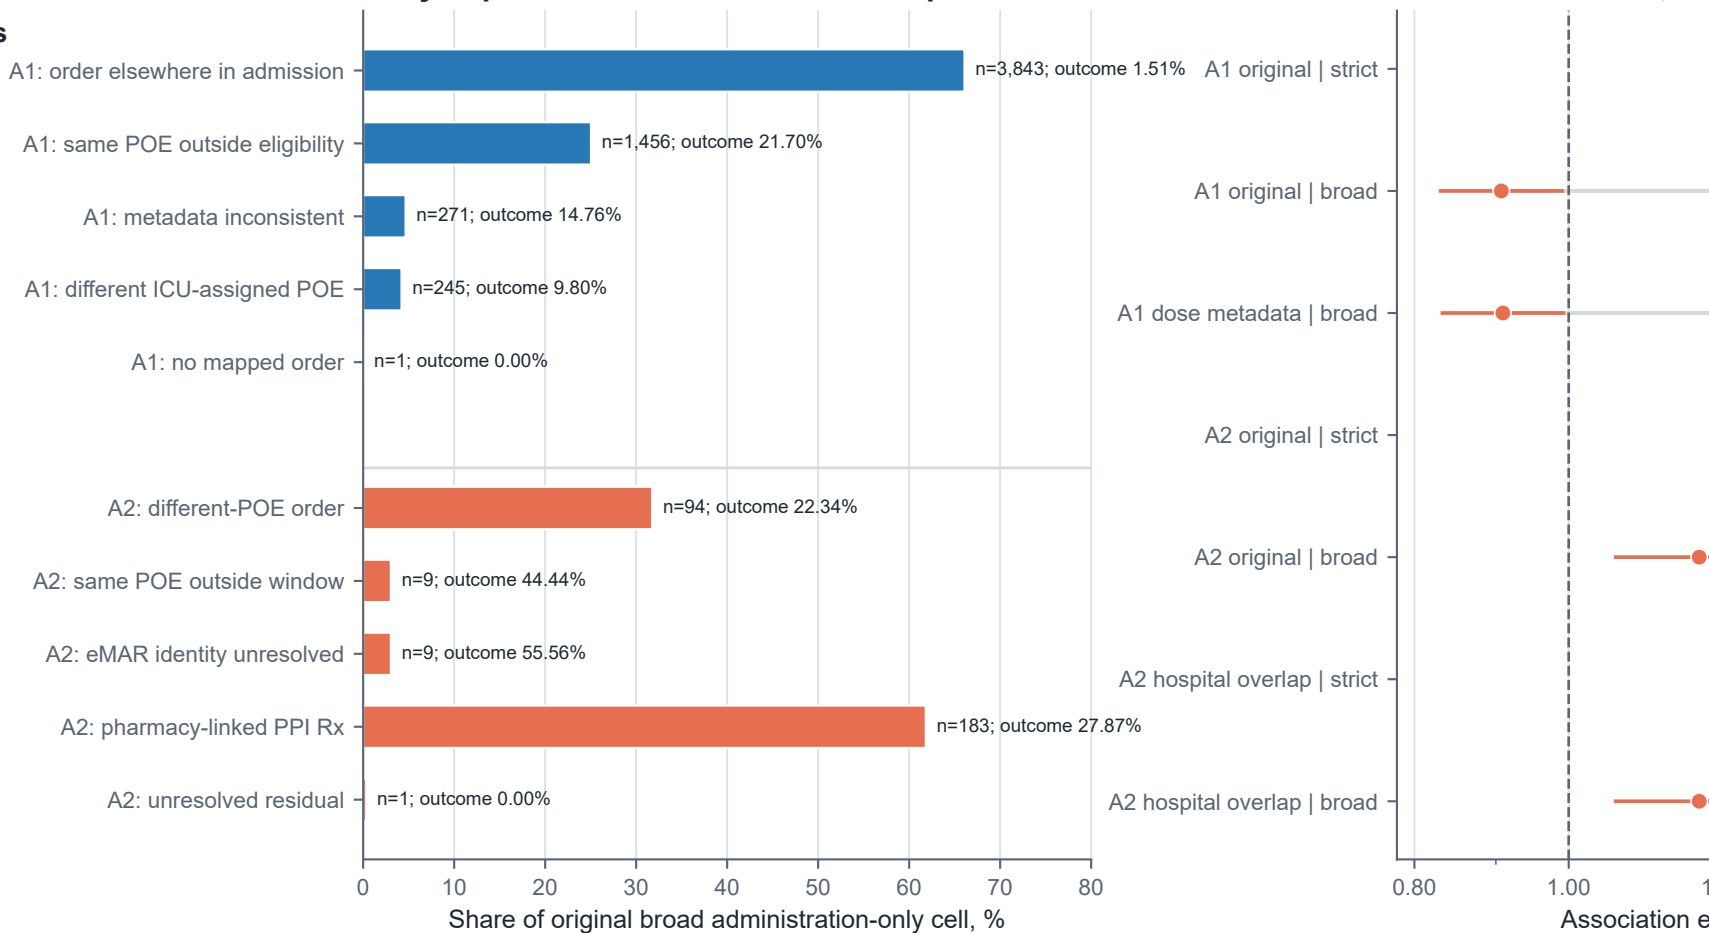

A2 PPI | 90-day mortality

Order +	n=81 65.43%	n=574 55.92%
Order -	n=1,862 38.35%	n=296 27.36%
	Broad administration -	Broad administration +

Cells show n and observed outcome risk

B

Broad-only exposure resolves into distinct provenance cells

C

Discordant cells, not source labels, move estimates
